(54) Title: CARBON MATERIAL FOR BATTERY ELECTRODE AND PRODUCTION METHOD AND USE THEREOF

(57) Abstract: The invention relates to a carbon material for forming a battery electrode, comprising carbon powder having a ho-  
mogeneous structure which is produced by causing an organic compound, serving as a raw material of a polymer, to deposit onto  
and/or permeate into carbonaceous particles, and subsequently polymerizing the organic compound, followed by thermal treatment  
at a temperature of 1,800 to 3,300°C, which comprises a structure which is substantially uniform throughout the entirety of the par-  
ticle from the surface to the central core where a graphite crystal structure region and an amorphous structure region are distributed.  
By using the material, a battery having high discharging capacity and low irreversible capacity, with excellent coulombic efficiency  
and excellent cycle characteristics can be fabricated.
